DETAILED ACTION

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a biodetector, classified in class 424, subclass 93.1.
- II. Claims 19-24, drawn to expression vector for making a fusion protein, classified in class 424, subclass 184.1.

The inventions are distinct, each from the other because of the following reasons:

The inventions of Groups I and II are directed to different products. Group I is drawn to a biodetector, whereas Group II is drawn to an expression vector for making a fusion protein. While the fusion protein is for use in the biodetector, the vector and protein can also be used in other procedures. For example, the vector can be used to produce the protein separate from the biodetector, or it can be used as an immunological composition.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1641

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The Group and/or Art Unit location of your application in the Patent and Trademark Office may have changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Group Art Unit 1641.
